"Adhesion of human skin fibroblasts to Cyr61 is mediated through integrin alpha 6beta 1 and cell surface heparan sulfate proteoglycans.";

"Biol. Chem. 275:24953-24961(2000).

-!- FUNCTION: Promotes cell proliferation, chemotaxis, angiogenesis and cell adhesion. Appears to play a role in wound healing by upregulating, in skin fibroblasts, the expression of a number of genes involved in angiogenesis, inflammation and matrix remodeling including VEGA-C, MMP1, MMP3, TIMP1, uPA, PAI-1 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

integrins alpha-3 and alpha-5 (By similarity). Cyr61-mediated gene regulation is dependent on heparin-binding (By similarity). Down-regulates the expression of alpha-1 and alpha-2 subunits of collagen type-1 (By similarity). Promotes cell adhesion and adhesive signaling through integrin alpha-6/beta-1, cell migration through integrin alpha-1/beta-5 and cell proliferation through integrin alpha-v/beta-3 (By similarity).

-!- SUBUNIT: Interaction with integrins is heparin- and cell-type-dependent and promotes cell adhesion (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: LOW IN KIDNEY, ADDENAL GLAND, TESTES, BRAIN, THALL THALL THALL THALL THALL THERET, UTERUS, AND SKELETAL MUSCLE, HIGHEST TAN THALL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DR PIR, A35669; A35669.

I mmediate early growth regulatory gene CYR61.";

I Biol. Chem. 25:28929.8036(200).

I Capulating, in akin fibrolates, the expression of a number of genes involved in angiogenesis, inflammation and matrix remodeling including VEGA-A, VEGA-C, MMP1, MMP3, TIMP1, UPA, PAI-1 and integrine alpha-3 (By similarity). Cyr61-mediated gene regulation is dependent on heparin-binding (By similarity). Downregulates the expression of alpha-1 and alpha-2 subunits of collagen type-1 (By similarity). Promotes Cell adhesion and adhesive signaling through integrine alpha-1/beta-5 and cell proliferation through integrin alpha-1/beta-5 and cell proliferation through integrin alpha-1/beta-5 and cell proliferation through integrin alpha-1/beta-3 (By similarity).

I SUBUNIT: Interaction with integrins is heparin- and cell-type-dependent and promotes cell adhesion (By similarity).

I SUBLIARITY: Contains 1 IGFBP domain.

I SIMILARITY: Contains 1 INFC domain.

I SIMILARITY: Contains 1 INFC domain.

-!- INDUCTION By growth factors.
-!- SIMILARITY: Belongs to the CCN family.
-!- SIMILARITY: Contains 1 IGFBP domain.
-!- SIMILARITY: Contains 1 TVSP type-1 domain.
-!- SIMILARITY: Contains 1 TVSP type-1 domain.
-!- SIMILARITY: Contains 1 C-terminal cystine knot-like (CTCK) domain.
cell adhesion and migration through integrin alphavbeta3, promotes endothelial cell survival, and induces angiogenesis in vivo.";

endothelial cell survival, and induces angiogenesis in vivo.";

1- FUNCTION: Bajol. 19:2588-2566(1999)

1- FUNCTION: Major connective tissue mitoattractant secreted by vascular endothelial cells. Promotes proliferation and differentiation of chondrocytes (By similarity). Mediates heparinand divalent cation-dependent cell adhesion in many cell types including fibroblasts, myofibroblasts, endothelial and epithelial cells (By similarity). Enhances fibroblast growth factor-induced DNA synthesis (By similarity).

-I- SUBGUELLULAR LOCATION: Found in the extracellular matrix and as a soluble form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Extracellular matrix; Heparin-binding;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          COUNECTIVE TISSUE GROWTH PACTOR. The heparin-binding 10 kDa fragment of connective tissue growth factor (CTGF) containing module 4 alone stimulates cell adhesion.";
J. Endocrinol. 176:R1-R7(2003).
-!- FUNCTION: Major connective tissue mitoattractant secreted by vascular endochelial cells. Promotes proliferation and differentiation of chondrocytes. Mediates heparin- and divalent cation-dependent cell adhesion in many cell types including fibroblasts, myofibroblasts, endothelial and epithalial cells. Enhances fibroblast growth factor-induced DNA synthesis.

           Translation and consecretization of nover neparation constitution and consecretization of nover neparation of acceptance in uterine secretory fluids. Identification as heparintered by 10,000 forms of connective tissue growth factor.";

J. Biol. Chem. 272.20275-2028(1997).

G. 1- FUNCTION: Major connective tissue mitoattractant secreted by vascular endothelial cells. Promotes proliferation and differentiation of chondrocytes (By similarity). Mediates heparinand divalent cation-dependent cell adhesion in many cell types including fibroblasts, myofibroblasts, endothelial and epithelial cells (By similarity).

G. SUBUNIT: Monomer (By similarity).

G. SUBUNIT: Monomer (By similarity).

G. SUBUNIT: Balongs to the extracellular matrix and as a soluble form (By similarity).

G. SIMILARITY: Contains 1 IGFBP domain.

G. SIMILARITY: Contains 1 IGFBP domain.

G. SIMILARITY: Contains 1 TWFC domain.

G. SIMILARITY: Contains 1 TWFC domain.

Weiskirchen R., Bister K.;
Submitted (AUG-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Immediate-early protein likely to play a role in cell
growth regulation (By similarity).

-!- SUBCELLULARITY: Belongs to the CCM family.

-!- SIMILARITY: Contains 1 IGFBP domain.

-!- SIMILARITY: Contains 1 VWFC domain.

-!- SIMILARITY: Contains 1 TSP type-1 domain.

-!- SIMILARITY: Contains 1 C-terminal cystine knot-like (CTCK) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ----STCPAAC--HCPLEAPKCAPGVGLVRDGCGCCKVCAK

"Nephroblastoma overexpressed gene (NOV) codes for a growth factor
that induces protein tyrosine phosphorylation.";
Gene 238:471-478(1999).
-!- FUNCTION: Can act as a growth factor for some cells and binds to
specific receptor that leads to the phosphorylation of a 221 kDa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       gene protein homolog).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                     US-09-495-448A-2

Sequence 2, Application US/09582337

Patent No. 656618

GENERAL INFORMATION

APPLICANT: Japan Tobacco, Inc.

TITLE OF INVENTION: Monoclonal Antibody Against Connective Tissue Growth Factor

TITLE OF INVENTION: and Medicinal Uses Thereof

TITLE OF INVENTION: and Medicinal Uses Thereof

TITLE OF INVENTION: and Medicinal Uses Thereof

CURRENT APPLICATION NUMBER: US/09/582,337

CURRENT FILING DATE: 1000-06-23

PRIOR FILING DATE: 1997-12-25

PRIOR FILING DATE: 1997-12-15

PRIOR FILING DATE: 1997-12-15

NUMBER OF SEQ ID NOS: 27

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 2

TGF-beta induced gene family - encodes proteins involved in growth and differentiation effects of TGF-beta-1.

Claim 2; Fig 1; 35pp; English

The protein sequence was deduced from the DNA sequence obtd. by screening a cDNA library made from AKR-2B mouse cells induced with TGF-betal and cyclohexamide with two probes from untreated AKR-2B mRNA and AKR-2B mRNA are actions calls treated with cyclohexamide and TGF- betal. The proteins encoded by hybridising colonies (beta-IG-M1 and beta-IG-M2) contain 38 cys residues and are induced by TGF-betal. Beta-IG-M2 displays 80 percent homology to the CEF-10 protein induced by v-src in chicken embryo fibroblasts and is identical to the protein encoded by cyrel, and immediate early response gene induced in quiescent BALB 3T3 cells by immediate early response gene induced in quiescent BALB 3T3 cells by serum treatment. Residues 49-56 of beta-IG-M1 conform to the GCGCCXXC motif reported in the amino half of insulin-like growth factor (IGF)

binding proteins. The C-terminal Cys rich region of beta-IG-Mi, -M2 and CEF-10 contain an amino acid sequence with strong homology to a motif found near the C-terminal of the malarial circumsporozoite (CS) protein, which is highly conserved among all species of malarial parasites stequenced to date (designated region II). This motif is also found in and cell-extraor which have cell adhesive properties that mediate cell-cell and cell-extraorlular matrix interactions, such as properdin, thrombospondin, and TRAP. The proteins encoded by TGF-beta induced genes are likely to be involved in mediation of the biological effects of TGF-beta relating to cell growth and differentiation. See also AAR25566. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                              120

The invention relates to extracellular matrix (ECM) signalling molecules involved in cellular response to growth factors. More particularly the involved in cellular response to growth factors. More particularly the involved in directed to cysteine-rich protein (Cyrel), and connective tissue such as fibroblast secreted protein (Frighl2) and connective tissue growth factor (CTGF) and nucleic acid molecules encoding such proteins. The polypeptides of the invention are members of cysteine-rich secreted protein family. Human Cyrel fragment is useful in methods for screening modulators of cell adhesion, cell migration, fibroblast cell confiferation, angiogenesis, wound healing and Cyrel-integrin receptor interaction. Modulator of Cyrel-integrin alphavbeta3 interaction is used for the preparation of a medicament for the treatment of atherosclerosis, heart disease, tumour metastasis, fibrosis, tumour growth, disorders associated with inadequate angiogenesis; aberrant granulation tissue development; abserrant fibroblast growth and wounds. Polymucleotides of the invention are useful in gene therapy. The present sequence is mouse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a monocyte mature differentiation factor (NMDF) which maintains the life of macrophages for long periods in liquid culture. MMDF can be used as an anti-cancer agent, an immune activator and to treat infectious diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          178
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes human small CCN-like growth factor (SCGF). SCGF has vulnerary and osteopathic activities, and can be used in gene therapy. The SCGF polypeptides and polynucleotides can be used for treating muscle wasting diseases, and osteoporosis, and to stimulate wound healing and tissue regeneration, to promote angiogenesis and to stimulate proliferation of vascular smooth muscle and endothelial cell production. The present sequence represents a CNN family protein which is given in comparison with the human SCGF in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CTCIDGAVGCIPLCPQELSLPNLGCPNPRLVKVSGQCCEBWVCDEDSIKDSLDDQDDLLG 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a method of inhibiting proliferation of uterine lejomyoma or preventing uterine lejomyoma formation. The method comprises increasing the level of Cyr61 in lejomyoma fination. The method invention also describes compounds and compositions that stimulate induction of the Cyr61 gene and compounds that increase Cyr61 activity. The compositions and the method of the invention are useful for preventing uterine lejomyoma formation or inhibiting proliferation of uterine lelomyoma formation or inhibiting proliferation of treating or preventing uterine leiomyoma formation, or inhibiting proliferation of uterine leiomyoma in a subject. The present sequence represents human Cyr61. Note: The present sequence sequence order in the figure. The start of the sequence is shown on page 8/10 of the figures and the rest of the

can be
        cell proliferation by blocking sex steroid induced and growth factor is epidermal, heparin binding epidermal or basic fibroblastic growth factor is epidermal, heparin binding epidermal or basic fibroblastic growth factor. (I) can be used to diagnose or stage breast cancer where the level of Cyr61 in a positive/suspect breast cancer call is compared to the level in a normal increase in the level of Cyr61 compared to the level in normal tissue indicates the presence of breast cancer. The level of Cyr61 being determined by exposing the tissues to (I), and an increase in the level of bound antibody by the suspect/positive cell as compared to the normal tissue indicates the presence of breast cancer. The present sequence represents the human Cyr61 protein, which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; angiogenesis; connective tissue growth factor-2; CTGF-2; tumour; ischaemia; restenosis; tissue repair; wound healing; congenital defect; cardiovascular disease; atherosclerosis; heart failure; angina; trauma; burns; osteoporosis; periodontal disease; liver failure; tranquillizer; vulnerary; cosmetic plastic surgery; vasotropic; hepatotropic; ulcer; gene therapy.
